Quick Guide:

2

User Guide:

The product is a two-handed flight joystick. It can be used with the left hand for the flight and right hand for the propeller or as a standalone controller. The product works with different flying game software applications. It is styled by simulating the real shape and the ergonomic design not only prevents fatigue after using it for a long period of time, but also makes the product more operable and interesting.

System requirement:

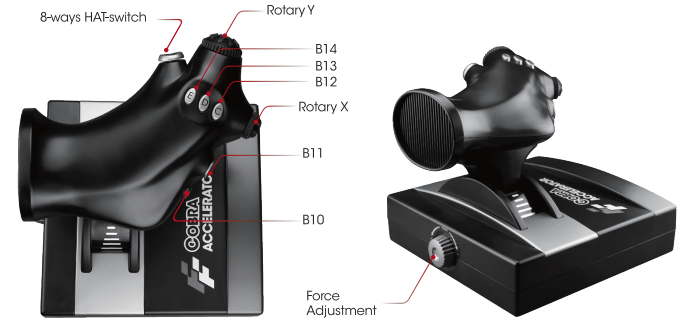

- 1.Supports of USB port
- 2.Windows XP/7/8/10
- 3.DirectX7.0 or later versions

Button layout & Function table:

- Taxes and 32keys are provided for two devices used simultaneously
